

100% CANADIAN BARLEY AND OAT PRODUCTS

In 2022, Semican furthered its development with the inauguration of a new processing facility for food-grade barley and oats, certified for human and animal consumption, with a production capacity of over 20,000 MT per year. The company thus continues to pursue its goal of adding value to high-quality Canadian-sourced products, in keeping with its mission:

“Nurturing excellence.”

Thanks to its unique business model, Semican is able to contribute to the sustainability of Canadian agriculture by buying back locally grown crops and offering processed grains to the end consumer.

Food processing affords Semican the opportunity to increase crop value for producers and provide quality products to the food market.

In a context of striving to feed the world in a sustainable manner, plant protein is a major stake for the future. With its Research Center developing new high-performance varieties and its certified processing plant, Semican leads the way, creating synergies and ensuring the traceability of its supply chain.

ABOUT SEMICAN

A leader in the North American cereal and forage seed market since 1982, Semican is a proudly Canadian company specializing in seed research, production, and marketing. With its own Research Center and exclusive seed varieties, Semican thrives on innovation to propel its development.

The company has continued to diversify with the addition of food processing to its operations. Semican is now positioned to offer a full scope of services to Canadian producers, applying its expertise to buying back and adding value to Canadian crops.
